**AIMS OF THE SYLLABUS**

The aims of the syllabus are to test candidates’

(i) development of further conceptual and manipulative skills in Mathematics;

(ii) understanding of an intermediate course of study which bridges the gap between Elementary Mathematics and Higher Mathematics;

(iii) acquisition of aspects of Mathematics that can meet the needs of potential Mathematicians, Engineers, Scientists and other professionals.

(iv) ability to analyse data and draw valid conclusion

(v) logical, abstract and precise reasoning skills.

**EXAMINATION SCHEME**

There will be two papers, Papers 1 and 2, both of which must be taken.

**PAPER 1:** will consist of forty multiple-choice objective questions, covering the entire syllabus. Candidates will be required to answer all questions in $1\frac{1}{2}$ hours for 40 marks. The questions will be drawn from the sections of the syllabus as follows:

- Pure Mathematics - 30 questions
- Statistics and Probability - 4 questions
- Vectors and Mechanics - 6 questions

**PAPER 2:** will consist of two sections, Sections A and B, to be answered in $2\frac{1}{2}$ hours for 100 marks.

Section A will consist of eight compulsory questions that are elementary in type for 48 marks. The questions shall be distributed as follows:

- Pure Mathematics - 4 questions
- Statistics and Probability - 2 questions
- Vectors and Mechanics - 2 questions

Section B will consist of seven questions of greater length and difficulty put into three parts: Parts I, II and III as follows:

- Part I: Pure Mathematics - 3 questions
Part II: Statistics and Probability - 2 questions
Part III: Vectors and Mechanics - 2 questions

Candidates will be required to answer four questions with at least one from each part for 52 marks.

DETAILED SYLLABUS

In addition to the following topics, more challenging questions may be set on topics in the General Mathematics/Mathematics (Core) syllabus.

In the column for CONTENTS, more detailed information on the topics to be tested is given while the limits imposed on the topics are stated under NOTES.

Topics which are marked with asterisks shall be tested in Section B of Paper 2 only.

KEY:

* Topics peculiar to Ghana only.

** Topics peculiar to Nigeria only

<td>(3) Binary Operations</td>
<td>Properties:</td>
<td>Use of properties to solve related problems.</td>
</tr>
<tr>
<td></td>
<td>Closure, Commutativity, Associativity and Distributivity, Identity elements and inverses.</td>
<td></td>
</tr>
<tr>
<td>(4) Logical Reasoning</td>
<td>(i) Rule of syntax: true or false statements, rule of logic applied to arguments, implications and deductions.</td>
<td>Using logical reasoning to determine the validity of compound statements involving implications and connectivities. Include use of symbols: ( \neg P ), ( P \lor Q ), ( P \land Q ), ( P \Rightarrow Q ).</td>
</tr>
<tr>
<td></td>
<td>(ii) The truth table</td>
<td>Use of Truth tables to deduce conclusions of compound statements. Include negation.</td>
</tr>
<tr>
<td>(5) Functions</td>
<td>(i) Domain and co-domain of a function.</td>
<td>The notation e.g. ( f : x \rightarrow 3x+4; ) ( g : x \rightarrow x^2 ); where ( x \in \mathbb{R} ).</td>
</tr>
<tr>
<td></td>
<td>(ii) One-to-one, onto, identity and constant mapping;</td>
<td>Graphical representation of a function; Image and the range.</td>
</tr>
<tr>
<td></td>
<td>(iii) Inverse of a function.</td>
<td>Determination of the inverse of a one-to-one function e.g. If ( f: x \rightarrow sx + \frac{4}{3} ), the inverse relation ( f^{-1}: x \rightarrow \frac{1}{3}x - \frac{4}{9} ) is also a function.</td>
</tr>
<tr>
<td></td>
<td>(iv) Composite of functions.</td>
<td>Notation: ( f(g(x)) ) =f(g(x)) Restrict to simple algebraic functions only.</td>
</tr>
<tr>
<td>(6) Polynomial Functions</td>
<td>(i) Linear Functions, Equations and Inequality</td>
<td>Recognition and sketching of graphs of linear functions and equations. Gradient and intercepts forms of linear equations i.e.</td>
</tr>
</tbody>
</table>
### (ii) Quadratic Functions, Equations and Inequalities

Graphical representation of linear inequalities in two variables. Application to Linear Programming.

Recognition and sketching graphs of quadratic functions e.g.
\[ f: x \rightarrow ax^2 + bx + c, \text{ where } a, b \text{ and } c \in \mathbb{R}. \]
Identification of vertex, axis of symmetry, maximum and minimum, increasing and decreasing parts of a parabola. Include values of \( x \) for which \( f(x) > 0 \) or \( f(x) < 0 \).
Solution of simultaneous equations: one linear and one quadratic. Method of completing the squares for solving quadratic equations. Express \( f(x) = ax^2 + bx + c \) in the form \( f(x) = a(x + d)^2 + k \), where \( k \) is the maximum or minimum value. Roots of quadratic equations – equal roots \( (b^2 - 4ac = 0) \), real and unequal roots \( (b^2 - 4ac > 0) \), imaginary roots \( (b^2 - 4ac < 0) \); sum and product of roots of a quadratic equation e.g. if the roots of the equation \( 3x^2 + 5x + 2 = 0 \) are \( \alpha \) and \( \beta \), form the equation whose roots are \( \frac{1}{\alpha} \) and \( \frac{1}{\beta} \). Solving quadratic inequalities.

### (ii) Cubic Functions and Equations

Recognition of cubic functions e.g. \( f: x \rightarrow ax^3 + bx^2 + cx + d \).
Drawing graphs of cubic functions for a given range. Factorization of cubic expressions and solution of cubic equations. Factorization of \( a^3 \pm b^3 \). Basic operations on polynomials, the remainder and factor theorems i.e. the
### (7) Rational Functions

(i) Rational functions of the form
\[ Q(x) = \frac{f(x)}{g(x)}, \quad g(x) \neq 0. \]
where \( g(x) \) and \( f(x) \) are polynomials. E.g.
\[ f(x) \rightarrow \frac{ax+b}{px^2+qx+r} \]

(ii) Resolution of rational functions into partial fractions.

### (8) Indices and Logarithmic Functions

(i) Indices

(ii) Logarithms

- Laws of Logarithms. Application of logarithms in calculations involving product, quotients, power (\( \log a^n \)), nth roots (\( \sqrt[n]{a} \), \( \log a^{i/n} \)).
- Solve equations involving logarithms (including change of base).
- Reduction of a relation such as \( y = ax^b \), \( (a,b \text{ are constants}) \) to a linear form:
\[ \log_{10} y = b \log_{10} x + \log_{10} a. \]
- Consider other examples such as
\[ \log ab^x = \log a + x \log b; \]
### (9) Permutation And Combinations.

- (i) Simple cases of arrangements
- (ii) Simple cases of selection of objects.

Knowledge of arrangement and selection is expected. The notations: \(^nC_r\) (\(^n\) over \(r\)) and \(^nP_r\) for selection and arrangement respectively should be noted and used. e.g. arrangement of students in a row, drawing balls from a box with or without replacements.

\[
^nC_r = \frac{n!}{r!(n-r)!}
\]
\[
^nP_r = \frac{n!}{(n-r)!}
\]

### (10) Binomial Theorem

- Expansion of \((a + b)^n\).
- Use of \((1+x)^n \approx 1+nx\) for any rational \(n\), where \(x\) is sufficiently small. e.g \((0.998)^{1/3}\)

Use of the binomial theorem for positive integral index only. Proof of the theorem **not** required.

### (11) Sequences and Series

- (i) Finite and Infinite sequences.
- (ii) Linear sequence/Arithmetic Progression (A.P.) and Exponential sequence/Geometric Progression (G.P.)
- (iii) Finite and Infinite series.
- (iv) Linear series (sum of A.P.) and exponential series (sum of G.P.)

- Recognizing the pattern of a sequence. e.g.
  - (i) \(U_n = U_1 + (n-1)d\), where \(d\) is the common difference.
  - (ii) \(U_n = U_1 r^{n-1}\) where \(r\) is the common ratio.

- (i) \(S_n = \frac{n}{2}(U_1+U_n)\)
- (ii) \(S_n = \frac{n}{2}[2a + (n-1)d]\)

r < 1

---

Generating the terms of a recurrence series and finding an explicit formula for the sequence e.g.

$0.9999 = \frac{9}{10} + \frac{9}{10^2} + \frac{9}{10^3} + \frac{9}{10^4} + \ldots$

Concept of a matrix – state the order of a matrix and indicate the type.

Equal matrices – If two matrices are equal, then their corresponding elements are equal. Use of equality to find missing entries of given matrices

Addition and subtraction of matrices (up to 3 x 3 matrices).

Multiplication of a matrix by a scalar and by a matrix (up to 3 x 3 matrices)

Evaluation of determinants of 2 x 2 matrices.

Evaluation of determinants of 3 x 3 matrices.

Application of determinants to solution of simultaneous linear equations.

e.g. If $A = \begin{pmatrix} a & b \\ c & d \end{pmatrix}$, then

$A^{-1} = \frac{1}{ad-bc} \begin{pmatrix} d & -b \\ -c & a \end{pmatrix}$

Finding the images of points under given linear transformation
(i) Trigonometric Ratios and Rules

Sine, Cosine and Tangent of general angles \(0^\circ \leq \theta \leq 360^\circ\). Identify trigonometric ratios of angles \(30^\circ\), \(45^\circ\), \(60^\circ\) without use of tables.

Use basic trigonometric ratios and reciprocals to prove given trigonometric identities.

Evaluate sine, cosine and tangent of negative angles.

Convert degrees into radians and vice versa.

Application to real life situations such as heights and distances, perimeters, solution of triangles, angles of elevation and depression,

Differentiation

(ii) Conic Sections

- Differentiation
- Distance between two points
- Gradient of a line
- Equation of a line:
  - (i) Intercept form
  - (ii) Gradient form
- Conditions for parallel and perpendicular lines
- Calculate the acute angle between two intersecting lines e.g. if $m_1$ and $m_2$ are the gradients of two intersecting lines, then $\tan \theta = \frac{m_1 - m_2}{1 + m_1m_2}$. If $m_1m_2 = -1$, then the lines are perpendicular.

*The distance from an external point $P(x_1, y_1)$ to a given line $ax + by + c$ using the formula $d = \frac{|ax_1 + by_1 + c|}{\sqrt{a^2 + b^2}}$.

Loci of variable points which move under given conditions

Equation of a circle:

- (i) Equation in terms of centre, $(a, b)$, and radius, $r$:
  
  $(x - a)^2 + (y - b)^2 = r^2$;

- (ii) The general form:
  $x^2 + y^2 + 2gx + 2fy + c = 0$, where $(-g, -f)$ is the centre and radius, $r = \sqrt{a^2 + b^2 - c}$.

Tangents and normals to circles

Equations of parabola in rectangular Cartesian coordinates ($y^2 = 4ax$, include parametric equations ($at^2, at$)). Finding the equation of a tangent and normal to a parabola at a given point.

*Sketch graphs of given parabola and find the equation of the axis of symmetry.

(i) The idea of a limit

(i) The intuitive treatment of limits.
<table>

</table>

**Integration**

(i) Indefinite Integral

| (i) The derivative of a function |

(ii) Its meaning and its determination from first principles (simple cases only).

- e.g. \(a^n + b, n \leq 3, (n \in I)\)
- e.g. \(a^m - bx^{m-1} + \ldots + k\), where \(m \in I, k\) is a constant.
- e.g. \(\sin x, y = a \sin x \pm b \cos x\). Where \(a, b\) are constants.

**(vi) Differentiation of Transcendental Functions**

- e.g. \(y = e^{ax}\), \(y = \log 3x\), \(y = \ln x\)

(ii) Restrict turning points to maxima and minima.

(iii) Include curve sketching (up to cubic functions) and linear kinematics.

(i) The equation of a tangent to a curve at a point.

(ii) Integration of polynomials of the form \(ax^n, n \neq -1\). i.e.

\[
\int x^n \, dx = \frac{x^{n+1}}{n+1} + c, \quad n \neq -1.
\]

(ii) Integration of sum and difference of polynomials.

- e.g. \(\int (4x^3 + 3x^2 - 6x + 5) \, dx\)

**(iii) Integration of polynomials of the form \(ax^n, n = -1\).**

(i) Integration of polynomials of the form \(ax^n, n \neq -1\). i.e.

\[
\int x^n \, dx = \frac{x^{n+1}}{n+1} + c, \quad n \neq -1.
\]

### Probability

(i) Meaning of probability.

(ii) Relative frequency.

(iii) Calculation of Probability using simple sample spaces.

(iv) Addition and multiplication of probabilities.

(v) Probability distributions.

*Equation of line of best fit by least square method. (Line of regression of y on x).

Tossing 2 dice once; drawing from a box with or without replacement.

Equally likely events, mutually exclusive, independent and conditional events.

Include the probability of an event considered as the probability of a set.

(i) Binomial distribution

\[ P(x=r) = \binom{n}{r} p^r q^{n-r}, \]

where

- Probability of success = \( p \),
- Probability of failure = \( q \),
- \( p + q = 1 \) and \( n \) is the number of trials. Simple problems only.

**Poisson distribution**

\[ P(x) = \frac{e^{-\lambda} \lambda^x}{x!} \]

where \( \lambda = np \), \( n \) is large and \( p \) is small.

### Vectors and Mechanics

(i) Definitions of scalar and vector Quantities.

(ii) Representation of Vectors.

Scatter diagrams, use of line of best fit to predict one variable from another, meaning of correlation; positive, negative and zero correlations.

Spearman's Rank coefficient.

Use data without ties.

Data. Using an assumed mean or true mean.
<table>

<tr>
<td>(vii) Resolution and Composition of Vectors.</td>
<td>Position vector of A relative to O is ( \overrightarrow{OA} ). Position vector of the midpoint of a line segment. Relate to coordinates of mid-point of a line segment. *Position vector of a point that divides a line segment internally in the ratio ( \lambda : \mu ). Applying triangle, parallelogram and polygon laws to composition of forces acting at a point. e.g. find the resultant of two forces ((12\text{N}, 030^\circ)) and ((8\text{N}, 100^\circ)) acting at a point. *Find the resultant of vectors by scale drawing.</td>
</tr>
<tr>
<td>(viii) Scalar (dot) product and its</td>
<td>Finding angle between two vectors. Using the dot product to</td>
</tr>
</tbody>
</table>
| (20)Statics | application. | establish such trigonometric formulae as
(i) \( \cos (a \pm b) = \cos a \cos b \mp \sin a \sin b \)
(ii) \( \sin (a \pm b) = \sin a \cos b \pm \sin b \cos a \)
(iii) \( c^2 = a^2 + b^2 - 2ab \cos C \)
(iv) \( \frac{\sin A}{a} = \frac{\sin B}{b} = \frac{\sin C}{c} \).

**(ix) Vector (cross) product and its application.**

(i) Definition of a force.

(ii) Representation of forces.

(iii) Composition and resolution of coplanar forces acting at a point.

(iv) Composition and resolution of general coplanar forces on rigid bodies.

(v) Equilibrium of Bodies.

(vi) Determination of Resultant.

(vii) Moments of forces.

(viii) Friction.

| (21)Dynamics | Apply to simple problems e.g. suspension of particles by strings.
Resultant of forces, Lami’s theorem
Using the principles of moments to solve related problems.
Distinction between smooth and rough planes.
Determination of the coefficient of friction. |
(i) The concepts of motion

(ii) Equations of Motion

(ii) The impulse and momentum equations:

(iv) Projectiles.

| The definitions of displacement, velocity, acceleration and speed. Composition of velocities and accelerations. Rectilinear motion. Newton’s laws of motion. Application of Newton’s Laws Motion along inclined planes (resolving a force upon a plane into normal and frictional forces). Motion under gravity (ignore air resistance). Application of the equations of motions: \( V = u + at \), \( S = ut + \frac{1}{2} at^2 \); \( v^2 = u^2 + 2as \). Conservation of Linear Momentum(exclude coefficient of restitution). Distinguish between momentum and impulse. Objects projected at an angle to the horizontal. |

1. **UNITS**
Candidates should be familiar with the following units and their symbols.

(1) **Length**
1000 millimetres (mm) = 100 centimetres (cm) = 1 metre (m).
1000 metres = 1 kilometre (km)

(2) **Area**
10,000 square metres (m²) = 1 hectare (ha)

(3) **Capacity**
1000 cubic centimeters (cm$^3$) = 1 litre (l)

**(4) Mass**

1000 milligrammes (mg) = 1 gramme (g)

1000 grammes (g) = 1 kilogramme (kg)

1000 grammes (kg) = 1 tonne.

**(5) Currencies**

Any other units used will be defined.

---

2. **OTHER IMPORTANT INFORMATION**

**(1) Use of Mathematical and Statistical Tables**

Mathematics and Statistical tables, published or approved by WAEC may be used in the examination room. Where the degree of accuracy is not specified in a question, the degree of accuracy expected will be that obtainable from the mathematical tables.

**(2) Use of Calculators**

The use of non-programmable, silent and cordless calculators is allowed. The calculators must, however not have a paper print out nor be capable of receiving/sending any information. Phones with or without calculators are not allowed.

**(3) Other Materials Required for the Examination**

Candidates should bring rulers, pairs of compasses, protractors, set squares etc required for papers of the subject. They will not be allowed to borrow such instruments and any other material from other candidates in the examination hall.

Graph papers ruled in 2mm squares will be provided for any paper in which it is required.

**(4) Disclaimer**
In spite of the provisions made in paragraphs 2 (1) and (2) above, it should be noted that some questions may prohibit the use of tables and/or calculators.
